DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 10/26/04 and 04/21/04 have been considered by the examiner and made of record in the application file.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-11, 21-32 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-35, respectively of U.S. Patent No. 6,881,112. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-35 of the U.S. Patent No. 6,881,112 encompass claims 1-11, 21-32 of the present application.

Allowable Subject Matter

3. Claims 1-11 and 21-32 are allowed.

As to claims 1 and 21, Akerberg (US 6,839,333) teaches TDMA-TDD/FDD radio communication system and channel selection method and apparatus for such a system. Voyer (US 6,961,542) teaches method of estimating a downlink channel. Hamabe (US 6,574,456) teaches method of preventing interference of adjacent frequencies in a cellular system by selection between adjacent carrier frequency and non-adjacent carrier frequency. Barratt (US 6,982,968) teaches non-directional transmitting from a wireless data base station having a smart antenna system. The teaching of above prior arts either alone or in combination fails to teach the frequency of the uplink connection from from the user equipment to the base station remains the same frequency and the frequency of the downlink connection from said base station to said User equipment change from a first downlink frequency to a second downlink frequency.

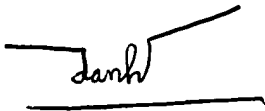

Dependent claims 2-11 and 22-32 are allowable for the same reason.
